The frequencies of the individual components of composite thrombotic and composite cardiovascular events represent the percentage of each respective event within the total number of each composite, rather than the frequencies of these events across the entire cohort. All outcomes were adjudicated by independent physicians using uniform pre-defined criteria.

<sup>a</sup> Includes composite VTE and arterial thrombotic events.

<sup>b</sup> Only Type I myocardial infarction was collected.

<sup>c</sup> Includes composite thrombotic events.

Abbreviations: CI = confidence interval; DVT = deep vein thrombosis; PE = pulmonary embolism; VTE = venous thromboembolism.
