

**ERRATUM****Nutritional Recommendations for the Prevention of Type 2 Diabetes Mellitus**

Skurk T, Grünerbel A, Hummel S et al. *Exp Clin Endocrinol Diabetes* 2024; 132: 68–82. DOI: 10.1055/a-2166-6943.

In the above-mentioned article, on page 76 (right-hand column, in the middle of ‘Recommendation’), one sentence is incorrect. Correct is: If there is an increased risk of diabetes, the recommended protein consumption is 10 to 25 % of the dietary energy consumption (%E) for patients under 60 years of age and 15 to 25 % for people over 60 years of age with intact renal function (glomerular filtration rate [GFR] > 60 ml/min/1.73m<sup>2</sup>) and a constant weight.

This was corrected in the online version on June, 03.2024.
