

Asymmetric 1,4-Addition with a Chiral Calcium-Pybox Catalyst

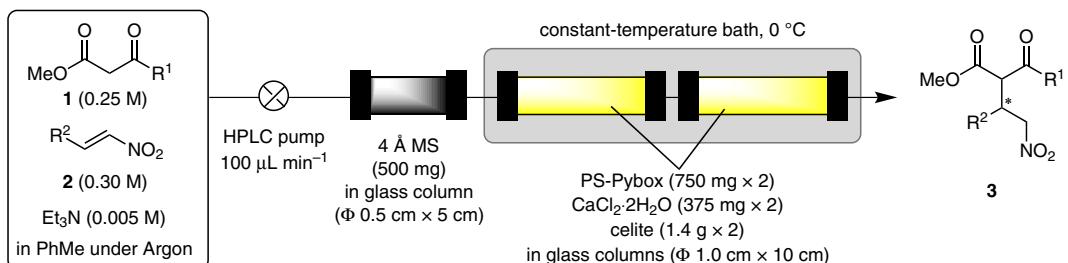

Polymer-supported pybox (PS-pybox)

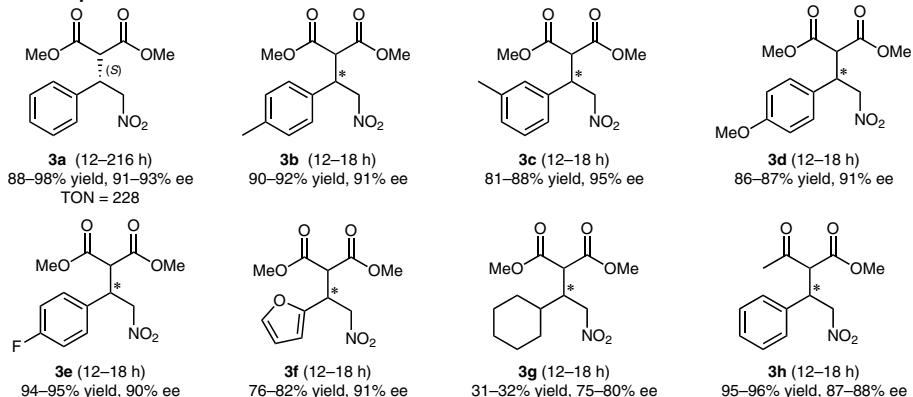

Batch conditions:

Flow conditions:

Selected examples:

Significance: A polymer-supported homochiral Pybox–calcium chloride complex catalyzed the asymmetric 1,4-addition of 1,3-dicarbonyl compounds **1** to nitroalkenes **2**, to afford the corresponding adducts **3** in up to 98% yield and 95% ee under batch or flow conditions.

Comment: The flow system worked for 204 hours without significant loss of catalytic activity to give **3a** in 95.5% yield with 92.0% ee on average. The total amount of product was 291.4 mmol and the turn-over number (TON) reached 228.
