Editor's comment

This letter reminds me of how one of the leading software companies of the world does its business: They launch a fairly good yet unperfected product (a "beta" product) and then they start the iteration or improvement process to clean up the bugs. Each new version (2.0/3.0 etc) is better than the previous one and eventually they grow closer to getting it to a place called 'flawless'. This I feel is a fascinating way of doing things in life. The authors have stumbled upon a new way of using the propeller flap and have promptly gone ahead and published it. Now whenever and whereever the 'throw over flap' will be researched and fine tuned, the fact that these authors were the pioneer of this idea would never be denied.
